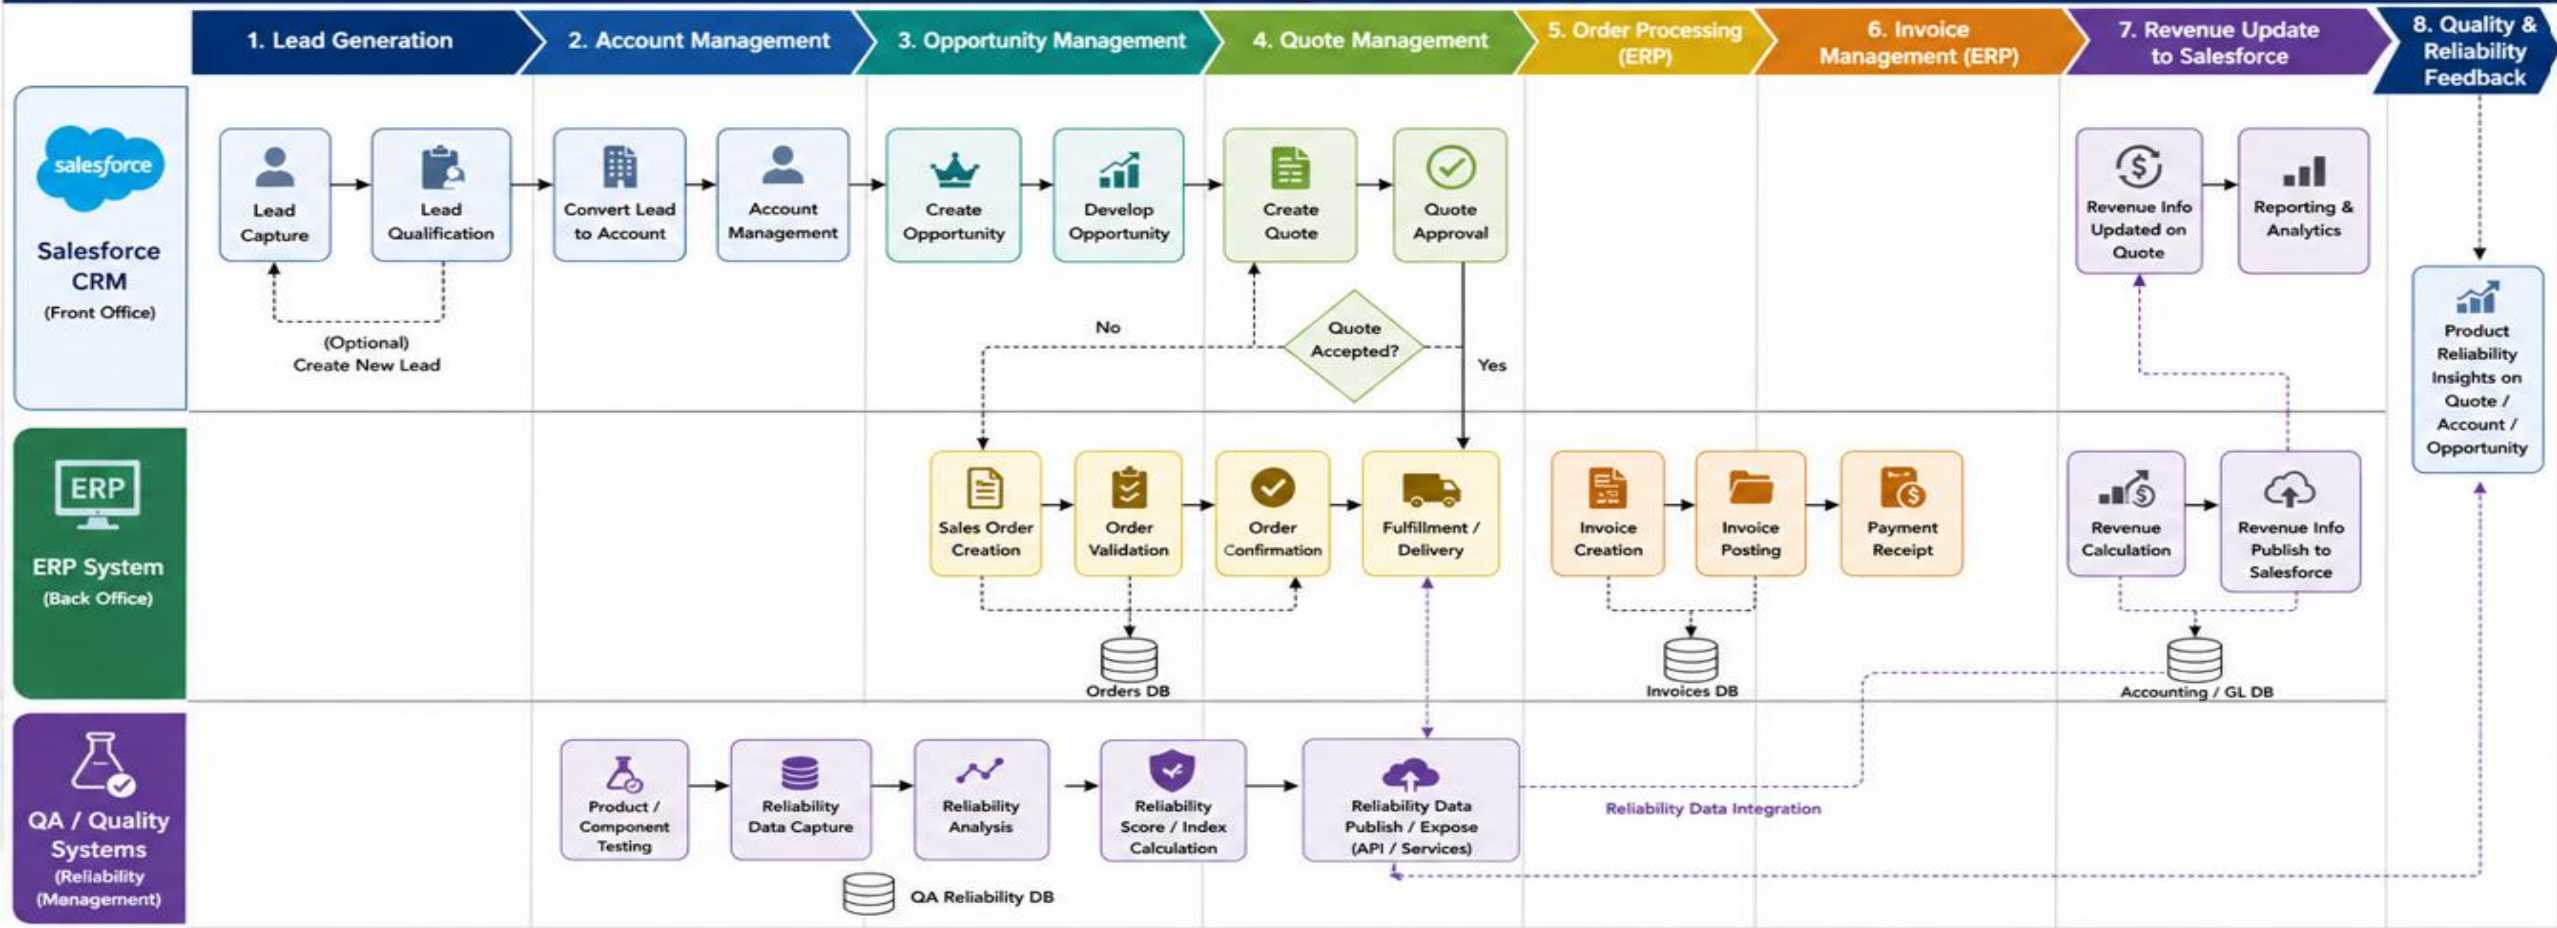
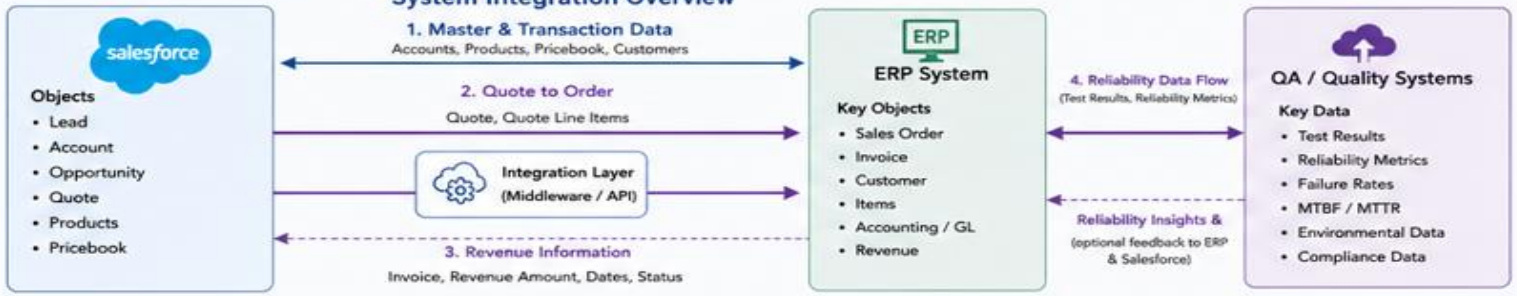
DATA MODEL

End-to-End Process: Lead to Quote with Order, Invoice & Revenue Update

with Product Reliability Data from QA Systems



System Integration Overview



Key Considerations

- Revenue information (e.g., Invoice Number, Revenue Amount, Revenue Date, Recognition Status) is updated back to the originating Salesforce Quote.
- Integration can be real-time via API or near real-time via middleware.
- Maintain data consistency for Account/Customer and Product mappings.
- Support partial invoicing and multiple invoices against a single order/quote.
- Handle error management, retries, and data reconciliation.
- Include product reliability data to support risk assessment, warranty management, and customer satisfaction.
- Ensure security, field-level mapping, and auditability.
